Products. It is mainly used as a building block in the production of polymers such as polytrimethylene terephthalate.. 1,3-Propanediol can be formulated into a variety of industrial products including composites, adhesives, laminates, coatings, moldings, aliphatic polyesters, copolyesters. It is also a solvent and used as an antifreeze and in wood paint. ...

### 1,3-Propanediol - Wikipedia

DuPont's Elvaloy is used as a low-temperature impact modifier for PET, as a PVC plasticizer, or as a compatibilizer in recycling PET/HDPE blends.

### PVC Plasticizer & Polymer Modifier | DuPont's Elvaloy

This review reports the recent advances in the most important and straightforward synthetic protocols for incorporating catechols into (bio)polymers, and discusses the emerging applications of these innovative multifunctional materials in biomedical, energy storage and environmental applications.

### Recent advances in the synthesis of catechol-derived (bio)

Biobased polymer derived from the biomass or issued from monomers derived from the biomass and which, at some stage in its processing into finished products, can be shaped by flow. Note 1: Bioplastic is generally used as the opposite of polymer derived from fossil resources.

### Bioplastic - Wikipedia

Bioplastic is generally used as the opposite of polymer derived from fossil resources.

Poly(lactic acid) or polylactide (PLA) is the most extensively researched and utilized biodegradable and renewable thermoplastic polyester, with potential to replace conventional petrochemical-based polymers.

### Poly(lactic acid) modifications - ScienceDirect

Abstract: Environmental, economic, and safety challenges have provoked packaging scientists and producers to partially substitute petrochemical-based polymers with biodegradable ones. The general purpose of this

review is to introduce polylactic acid (PLA), a compostable, biodegradable thermoplastic made from renewable sources.
