Results. The study sample consisted of 287 subjects, predominately women, with partners and children. Most professionals presented moderate stress levels and control as a coping strategy (74.47% and 79.93%, respectively), and burnout was present among 12.54%.

Stress, coping and burnout among Intensive Care Unit

The level of support for evolution among scientists, the public and other groups is a topic that frequently arises in the creation-evolution controversy and touches on educational, religious, philosophical, scientific and political issues. The subject is especially contentious in countries where significant levels of non-acceptance of evolution by general society exist although evolution is ...

Kin selection is the evolutionary strategy that favours the reproductive success of an organism's relatives, even at a cost to the organism's own survival and reproduction. Kin altruism can look like altruistic behaviour whose evolution is driven by kin selection. Kin selection is an instance of inclusive fitness, which combines the number of offspring produced with the number an individual ...

Another data source is nationally representative surveys of women. Rates from such surveys are available primarily for countries of the former Soviet Union where abortion is legal and self-reported levels of abortion incidence exceed rates based on official statistics indicating that the latter are incomplete.
