Melting and crystallization of poly(3-hydroxybutyrate): effect of heating/cooling rates on phase transformation

Melting and crystallization of poly(3-hydroxybutyrate)

Product Information Â® polyester elastomer Hytrel Â® Rheology and Handling Hytrel polyester elastomers are true thermoplastic polymers that are processed using ...

HytrelÂ® Product Information - DuPont

glass transition (in polymer science): Process in which a polymer melt changes on cooling to a polymer glass or a polymer glass changes on heating to a polymer melt.. Note 1: Phenomena occurring at the glass transition of polymers are still subject to ongoing scientific investigation and debate.

X-ray crystallography (XRC) is a technique used for determining the atomic and molecular structure of a crystal, in which the crystalline structure causes a beam of incident X-rays to diffract into many specific directions. By measuring the angles and intensities of these diffracted beams, a crystallographer can produce a three-dimensional picture of the density of electrons within the crystal.

1 BASIC HEAT TRANSFER AND SOME APPLICATIONS IN POLYMER PROCESSING (A version of this

was published as a book chapter in *Plastics Technician's Toolbox*,

BASIC HEAT TRANSFER AND SOME APPLICATIONS IN POLYMER

The typical diagram of this type is illustrated by the figure below. The diagram has two curves – liquidus (equilibrium conditions of liquid phase with first solid crystals – primary crystals) and solidus (equilibrium conditions of last liquid with nearly complete solid). Consider solidification of an alloy with concentration C. When the alloy temperature is higher than T_L , single liquid ...

Phase transformations and phase diagrams [SubsTech]

The development of visible-light-mediated allylation of unactivated $sp^3 C-H$ bonds is reported. The remote allylation was directed by the amidyl radical, which was generated by photocatalytic fragmentation of a pre-functionalized amide precursor.

Poly (p-phenylene terephthalamide) fibers prepared by wet or dry-jet wet spinning processes have a notable response to very brief heat treatment (seconds) under tension. The modulus of the as-spun fiber can be greatly affected by the heat treatment conditions (temperature, tension and duration). The ...
