What is ANTLR? ANTLR is a parser generator, a tool that helps you to create parsers. A parser takes a piece of text and transforms it in an organized structure, such as an Abstract Syntax Tree (AST). You can think of the AST as a story describing the content of the code, or also as its logical representation, created by putting together the various pieces.

10.4. Replaced elements 10.4.1. Embedded content. The embed, iframe, and video elements are expected to be treated as replaced elements.. A canvas element that represents embedded content is expected to be treated as a replaced element; the contents of such elements are the element's bitmap, if any, or else a transparent black bitmap with the same intrinsic dimensions as the element.

Not everything works for content type application/json.. If you are using Ext JS form submit to upload file, be aware that the server response is parsed by the browser to create the document for the <iframe>.. If the server is using JSON to send the return object, then the Content-Type header must be set to text/html in order to tell the browser to insert the text unchanged into the document body.
