CONTENTS M. D'Elalija, Physics Mass and Inertia. The tendency of an object to resist any attempt to change its motion is called the inertia of the object. Mass is a measurement of inertia. The greater the mass of a body, the less it accelerates under the action of an applied force.

1.1 Reference frames. An important aspect of the fundamental law of Newtonian mechanics, $F = ma$, (1.1.1) is that it is formulated in a reference frame which is either at rest or moving with a uniform velocity (the velocity must be constant both in magnitude and in direction). Such frames are called inertial frames.

Preliminaries 7 for q is the charge of a point-like object in motion at velocity \vec{v} in a magnetic field \vec{B} , and \vec{F} is the resulting force acting on the particle. We have to learn that the $\vec{\times}$ symbol is the cross product of \vec{v} and \vec{B} (to most students at any rate, at least at first).

In quantum mechanics, then, knowledge about the current dynamical state of a system is embodied in a set of quantum amplitudes. In classical physics, by contrast, we can state with certainty which value we will measure, and we characterise the system's current dynamical state by simply giving this value.

a book about physics for mathematicians; of course, symplectic structures will eventually make an appearance, but the problem is that I could easily understand symplectic structures, it's elementary mechanics that I don't understand.

THE OPERATORS OF QUANTUM MECHANICS 19. 2.3 The Operators of Quantum Mechanics. The numerical quantities that the old Newtonian physics uses, (position, momentum, energy, ...), are just "shadows" of what really describes nature: operators. The operators described in this section are the key to quantum mechanics.

Fundamental Quantum Mechanics for Engineers

Classical mechanics deals with the question of how an object moves when it is subjected to various forces, and also with the question of what forces act on an object which is not moving.

PRINCIPLES OF STATISTICAL MECHANICS The earth-moon system. In this system, the mechanical parameters are the mass of the earth, the mass of the moon, and (because the earth and moon interact gravitationally), the gravitational constant G . The dynamical variables are the position and velocity (or momentum) of each body.
