16S ribosomal RNA (or 16S rRNA) is the component of the 30S small subunit of a prokaryotic ribosome that binds to the Shine-Dalgarno sequence. The genes coding for it are referred to as 16S rRNA gene and are used in reconstructing phylogenies, due to the slow rates of evolution of this region of the gene. Carl Woese and George E. Fox were two of the people who pioneered the use of 16S rRNA in ...

Introduction. Enzyme assays are performed to serve two different purposes: (i) to identify a special enzyme, to prove its presence or absence in a distinct specimen, like an organism or a tissue and (ii) to determine the amount of the enzyme in the sample.

Ogni tipo di base presente su un filamento forma un legame con la base posta sul filamento opposto. Tale evento   noto come appaiamento complementare. Le basi puriniche formano legami idrogeno con le basi pirimidiniche: A pu  legare solo T e G pu  legare solo C. L'associazione di due basi viene comunemente chiamata paio di basi ed   l'unit  di misura maggiormente utilizzata per definire la ...
