If a horse is kept in a pasture, the amount of land needed for basic maintenance varies with climate, an animal needs more land for grazing in a dry climate than in a moist one. An average of between one and 3 acres (12,000 m<sup>2</sup>) of land per horse will provide adequate forage in much of the world, though hay or other feed may have to be supplemented in winter or during periods of drought.

Honey is a biologic wound dressing with multiple bioactivities. Each of the healing-promoting activities can be found separately in pharmaceutical products, but in honey they are all present and work together synergistically to enhance the healing process.

### **Honey: A Biologic Wound Dressing | Wounds Research**

Wound and skin infections are the growth and spread of microbes, usually bacteria, within the skin or a break or wound in the skin. These infections trigger the body's immune system and cause inflammation and tissue damage within the skin or wound and slow the healing process. Many infections remain confined to a small area, such as an infected scratch or hair follicle, and usually resolve on ...
