Adolescence (from Latin *adolescere*, meaning 'to grow up') is a transitional stage of physical and psychological development that generally occurs during the period from puberty to legal adulthood (age of majority). Adolescence is usually associated with the teenage years, but its physical, psychological or cultural expressions may begin earlier and end later.

Introduction. The teen years have long been noted as a time of dramatic changes in body and behaviour. Insight into the neurobiology underlying these cognitive and behaviour changes has been greatly enhanced by the advent of magnetic resonance imaging (MRI), which allows safe and unprecedented access to the anatomy and physiology of the living brain.

According to Alberts, Elkind, and Ginsberg the personal fable "is the corollary to the imaginary audience. Thinking of himself or herself as the center of attention, the adolescent comes to believe that it is because he or she is special and unique". It is found during the formal operational stage in Piagetian theory, along with the imaginary audience. ...
