The term learning curve is used in two main ways: where the same task is repeated in a series of trials, or where a body of knowledge is learned over time. Hermann Ebbinghaus first described the learning curve in 1885 in the field of the psychology of learning, although the name did not come into use until 1903. In 1936 Theodore Paul Wright described the effect of learning on production costs ...

In mathematical physics, a closed timelike curve (CTC) is a world line in a Lorentzian manifold, of a material particle in spacetime that is "closed", returning to its starting point. This possibility was first discovered by Willem Jacob van Stockum in 1937 and later confirmed by Kurt Gödel in 1949, who discovered a solution to the equations of general relativity (GR) allowing CTCs known as ...

The e-90 is a close coupled centrifugal in-line pump designed for the commercial HVAC market. The e-90 offers excellent efficiency for energy savings. The e-90 can be installed in either horizontal or vertical applications. The new robust EPR/ carbon/ silicon carbide mechanical seal lowers maintenance and increases the life of the pump. This pump is

Series e-90 Small Close Coupled In-Line Centrifugal Pumps

April 12, 2012. Well, we had to install yet another hard drive since the last one unexpectedly died on us. Fortunately this time we had everything backed up on DVDs and getting everything back in order wasn't that difficult.

Replaced with Series VSX. The Series VSC is a double suction pump that has a vertically split casing perpendicular to the pump shaft. The suction and discharge flanges have been rotated 90 degrees to face up, resulting in an extremely compact, space-saving design split case pump.

Learning Curves have traditionally been used for cost estimating and training purposes. However, they have a much wider applications, including Manufacturing and Marketing strategy. They underly the concept of Continuous Improvement. Like compound interest, they generate large benefits from seemingly small, incremental change.

3 The survivor function or survivorship function, $S(t)$, is the complement to the CDF and is defined as follows: $S(t) = 1 - F(t)$ for continuous time; or $S(t) = \prod_{m=1}^t (1 - F_m)$ for discrete time. The value of the survivor function for an individual is the probability that the event has not yet occurred at time t (continuous) or prior to the close of observation period m (discrete time).
