Whole brain emulation (WBE), mind upload or brain upload (sometimes called "mind copying" or "mind transfer") is the hypothetical futuristic process of scanning the mental state (including long-term memory and "self") of a particular brain substrate and copying it to a computer. The computer could then run a simulation model of the brain's information processing, such that it responds in ...

Leadership theory and research in the new millennium: Current theoretical trends and changing perspectives

Leadership theory and research in the new millennium

The adaptive process requires that organizations move away from status quo. Most organizations, however, are designed as complex systems rather than complex adaptive systems (Stacey, 1995). Complex systems differ from complex adaptive systems in that they are structured for efficiency and control, rather than adaptability (Brown and Eisenhardt, 1997; Eisenhardt and Tabrizi, 1995).

Leadership for organizational adaptability: A theoretical

- Computers and hardware have one giant limitation. They can't do anything until they are told exactly what to do. That critical ingredient is where the programmer and coder comes in, to tell the computer what to do. From the very first theoretical computer, there was the need to come up with a way to give instructions, or steps for the computer to complete.
