Medical ultrasound (also known as diagnostic sonography or ultrasonography) is a diagnostic imaging technique based on the application of ultrasound. It is used to create an image of internal body structures such as tendons, muscles, joints, blood vessels, and internal organs. Its aim is often to find a source of a disease or to exclude pathology. The practice of examining pregnant women using ...

From the book reviews: "The book is geared towards all specialities interested in musculoskeletal ultrasound, including orthopaedics surgeons, sports physicians, rheumatologists and of course radiologists.

Ultrasound of the Musculoskeletal System (Medical

Fat removal procedures are used mostly in cosmetic surgery to remove unwanted adipose tissue. The procedure may be invasive, as with liposuction, or noninvasive, using laser energy, radiofrequency, ultrasound or cold (cryoablation) to reduce fat, sometimes in combination with injections.. Fat is sometimes removed from one location to another on a person in an autograft, for example in some ...
