Vector calculus, or vector analysis, is a branch of mathematics concerned with differentiation and integration of vector fields, primarily in 3-dimensional Euclidean space. The term "vector calculus" is sometimes used as a synonym for the broader subject of multivariable calculus, which includes vector calculus as well as partial differentiation and multiple integration.

In the three-dimensional Cartesian coordinate system, the gradient of some function  $(,)$  is given by:  $\hat{\nabla} = \hat{i} \frac{\partial}{\partial x} + \hat{j} \frac{\partial}{\partial y} + \hat{k} \frac{\partial}{\partial z}$ , where  $\hat{i}, \hat{j}, \hat{k}$  are the standard unit vectors.. The gradient of a tensor field,  $T$ , of order  $n$ , is generally written as  $\hat{\nabla} \cdot T = \hat{\nabla} T$  and is a tensor field of order  $n + 1$ . In particular, if the tensor field has order 0 (i.e. a scalar),  $\phi$ , the resulting gradient,

Calculus III. Here are my online notes for my Calculus III course that I teach here at Lamar University. Despite the fact that these are my "class notes", they should be accessible to anyone wanting to learn Calculus III or needing a refresher in some of the topics from the class.

Welcome to my math notes site. Contained in this site are the notes (free and downloadable) that I use to teach Algebra, Calculus (I, II and III) as well as Differential Equations at Lamar University. The notes contain the usual topics that are taught in those courses as well as a few extra topics that I decided to include just because I wanted to.

A First Course in Linear Algebra is an introductory textbook designed for university sophomores and juniors. Typically such a student will have taken calculus, but this is not a prerequisite. The book begins with systems of linear equations, then covers matrix algebra, before taking up finite-dimensional vector spaces in full

generality.
