A router is a hand tool or power tool that a worker uses to rout (hollow out) an area in relatively hard material like wood or plastic. Routers are mainly used in woodworking, especially cabinetry. Routers are typically handheld or fastened cutting end-up in a router table. The hand tool type of router is the original form. It is a specialized type of hand plane with a broad base and a narrow ...

What is Wood Veneer? It is a thin slice of wood cut from a log with a slicing, peeling, or sawing machine. It is used on plywood, fine furniture, and laminated shapes for decorative and architectural purposes.

### **The JoeWoodworker Guide to Veneer Figure, Methods, and Options**

The acceptable moisture levels in wood depend on the final use of the wood, the type and thickness of the wood, and the average relative humidity (RH) in the environment where the wood is to be used. Based on common guidelines or recommendations, the acceptable moisture level for wood objects used indoors is

generally 6% to 8% for wood flooring, 6% to 9% furniture, and 9% to 14% for construction.

A router table is a stationary woodworking machine in which a vertically oriented spindle of a woodworking router protrudes from the machine table and can be spun at speeds typically between 3000 and 24,000 rpm. Cutter heads (router bits) may be mounted in the spindle chuck. As the workpiece is fed into the machine, the cutters mold a profile into it. The machine normally features a vertical ...

The Ultimate Router Table. First, I built the carcass using a leftover sheet of 3/4" plywood for the outer sides. Thought at the time it was birch ply, but it turned out to be a handsome remnant of maple ply I had used for my wife's china display cabinet and computer desk earlier.. Here it is, set up for dry fit (not glued up).
